# How to improve face recognition performance

Exposure determines the quality of the captured face character. For our device, default setting for exposure is auto mode, but for indoor use, manual and fixed exposure value could improve the face recognition performance. And how to set the exposure mode, please reference the below:

Step 1: Menu-->System-->Face Parameter

Step2: Face Parameter-->Exposure (OK) -->Exposure Mode (Press Left/Right) -->Manual

Step3: Manual (Press Ok) -->Shutter (Press Left/Right) -->1/4000.

Exit and then saved. You will find the camera capture face performance improve a lot in most indoor environment
